

DOORMINATOR

Door Handling Units

The patent pending Doorminator allows installation of heavy and awkward doors by a single person, saving time and money! Thanks to heavy duty castors, the door can be easily rolled into position through the doorway, positioned and held in place during installation. Fully adjustable, the Doorminator can be tilted front-to-back and side-to-side, and moved up-and-down allowing precise alignment with the door jamb. Transport and storage is easy thanks to the folding mechanism, and although easy to handle, construction is robust enough to stand up to a tough life on site.

KEY FEATURES

- Fully adjustable for easy alignment
- One person to install
- Folds up for easy transport

Doorminator model summary:

Model	Carrying capacity	Maximum door height	Maximum door width	Weight
3070	72kg	2130mm	1220mm	34kg
40100	182kg	3050mm	1220mm	50kg

HSE advise that mechanical aids should be used to assist jobs where practical, reducing or eliminating risk of injury. Back injuries from manual handling are a major cause of occupational ill health in the UK.
